Assignment-6

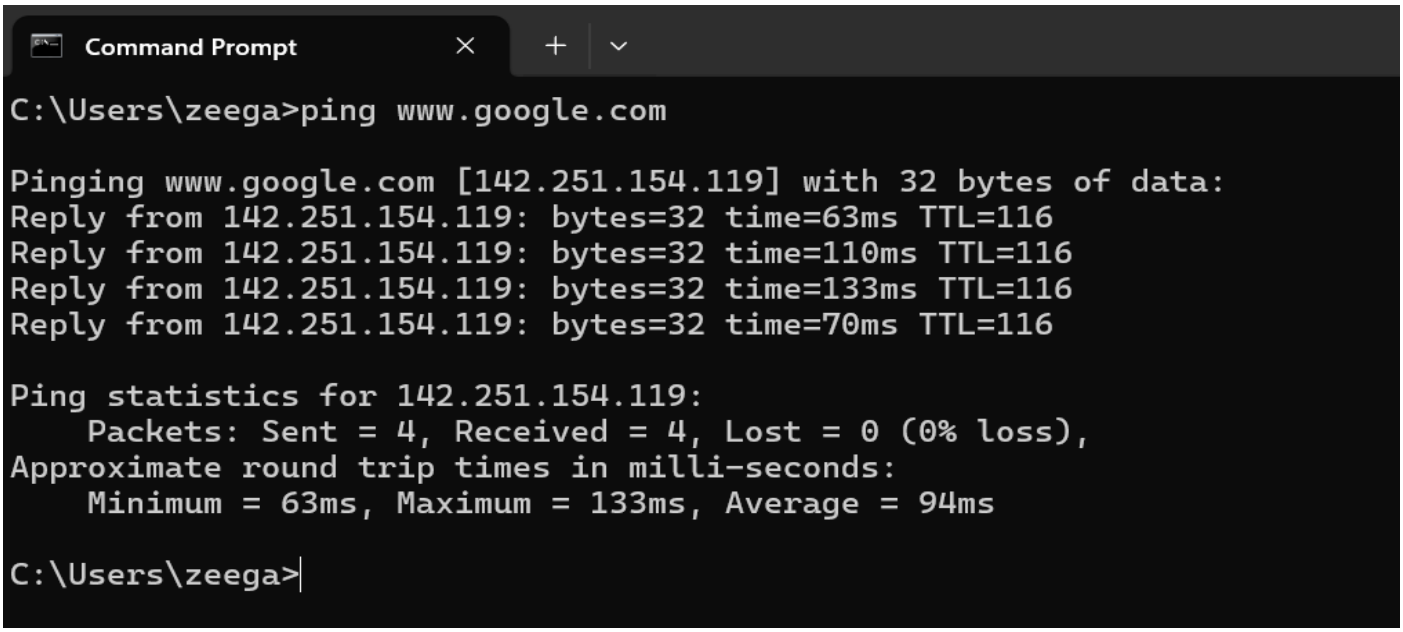

Prepare By

~pintu mer

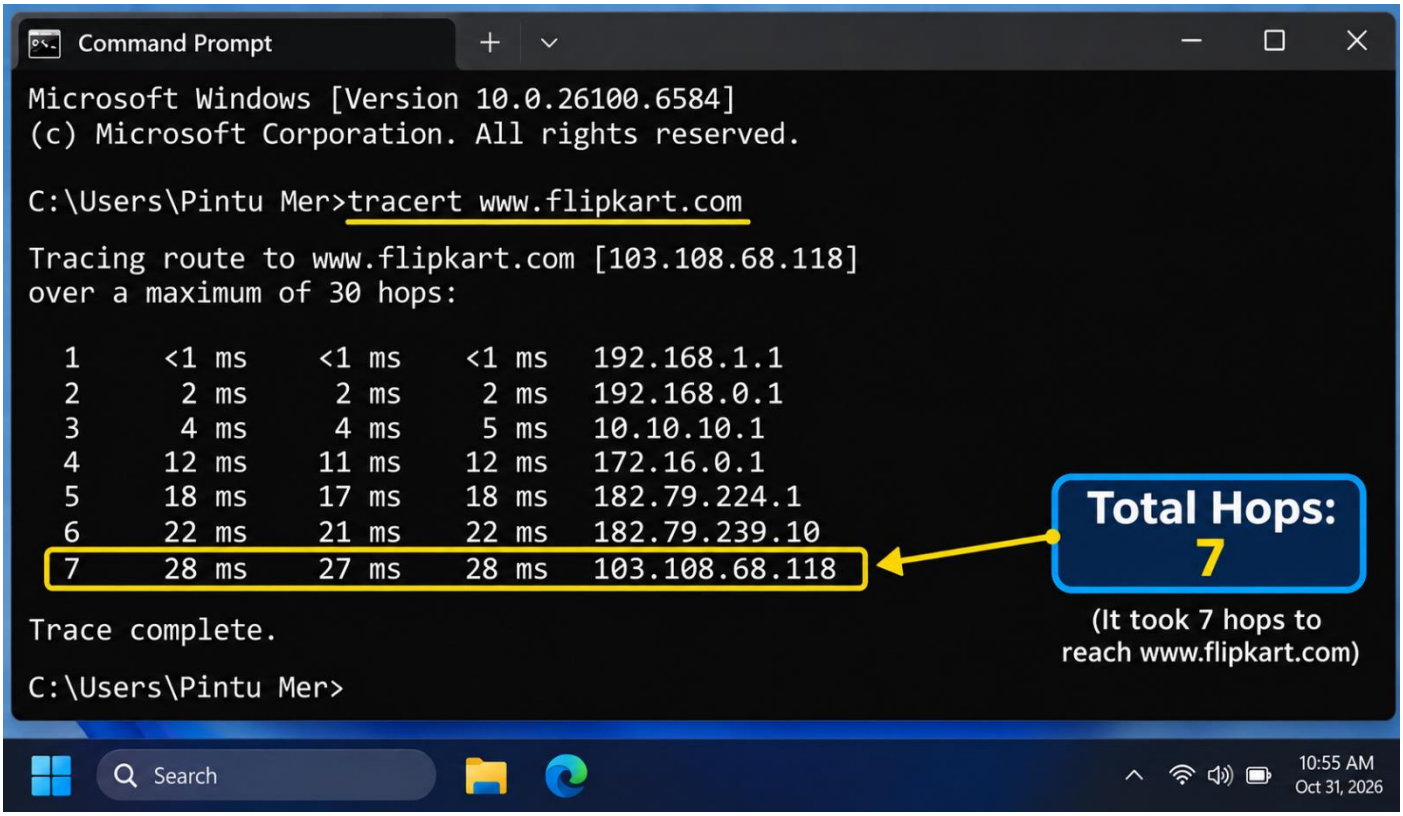

1.Open the command prompt and use the ipconfig tool to find your computer's IPv4 address and default gateway, then take a screenshot of the output.

2. Use the ping command to check the connectivity between your computer and www.google.com, then note down the average response time shown.

3. Run the tracert (or traceroute on Linux/Mac) command to www.flipkart.com and list the number of hops it takes to reach the destination.

4. Use the nslookup tool to find the IP address of www.spotify.com and explain in one line what this tool helps you verify.

```
C:\Users\zeega>nslookup www.spotify.com
Server:  UnKnown
Address:  10.150.234.131

Non-authoritative answer:
Name:    atc.spotify.map.fastly.net
Addresses:  2a04:4e42:31::810
          151.101.211.42
Aliases:  www.spotify.com
```

➔ nslookup helps verify whether a domain name is correctly resolving to an IP address through DNS.

5. A friend says they cannot access Zomato’s website from their laptop. Suggest a sequence of three troubleshooting commands (choose from: ping, ipconfig, tracert, nslookup) you would run to diagnose the issue, and briefly state what each command would help you check.Hint:Think about checking both network connectivity and DNS resolution.

Answer: Troubleshooting Commands

1. ipconfig

```
ipconfig
```

It checks the laptop's IP address, subnet mask, and default gateway.

2. ping

```
ping 8.8.8.8
```

It checks whether the laptop can connect to the internet.

3. nslookup

```
nslookup www.zomato.com
```

It checks whether the DNS can find the IP address of Zomato's website.

Conclusion: These three commands help identify network connectivity and DNS problems.
